

High Efficiency Condensing Units for Refrigeration

Save \$400–\$1,200 per horsepower!

The Sponsors of NHSaves have partnered with distributors to offer big savings on the purchase of high efficiency condensing units (HECU) for refrigeration to commercial and industrial customers in New Hampshire.

Participating distributors apply the rebate at the point-of-sale—no waiting, no paperwork!

How It Works:

- 1 Determine your facility's needs.** Work with your contractor to figure out what qualifying high efficiency condensing unit model is right for your business.
- 2 Find a participating distributor.** Visit nhsaves.com/businesses-towns/electric/electric-hvac-equipment/ for a list of participating distributors that you and your contractor can work with to find a suitable eligible model.
- 3 Purchase a qualifying high efficiency condensing unit.** Your contractor will collect your contact information and installation site details for the sale.
- 4 Receive your incentive and start saving energy**
Confirm your equipment will be installed at a nonresidential facility and is not already receiving a rebate through another efficiency program in NH.

Rebate:
**\$400–\$1,200/
horsepower***

Estimated average
annual electricity
savings:
Up to \$540

*Rebate amount depends on
unit horsepower

Estimated average annual
electricity savings based on
electricity savings estimates
from the Massachusetts
Technical Resources Manual
using the average commercial
energy rate of \$0.16/kwh.
